Transforming the Outpatient Experience with Clinical-Grade RTLS

Florida Cancer Specialists & Research Institute recently installed CenTrak's Clinical-Grade Real-Time Location System (RTLS) to transform their outpatient experience and help with optimizing patient flow processes. Shortening patient wait times, ensuring patient safety and satisfaction, as well as increasing the cancer center's patient treatment capacity are among the benefits of the new solution.

Cancer treatment can be a daunting challenge for many patients, but optimizing clinical workflow is helping to enhance patients' overall experience receiving treatment. New technologies are providing outpatient clinics with increased visibility and data needed to accelerate the overall treatment process, so patients can more quickly return to their normal routines.
